

LOM320 for LMC340
Condensing Unit

Lodam Ethernet Module – Webserver

Datasheet

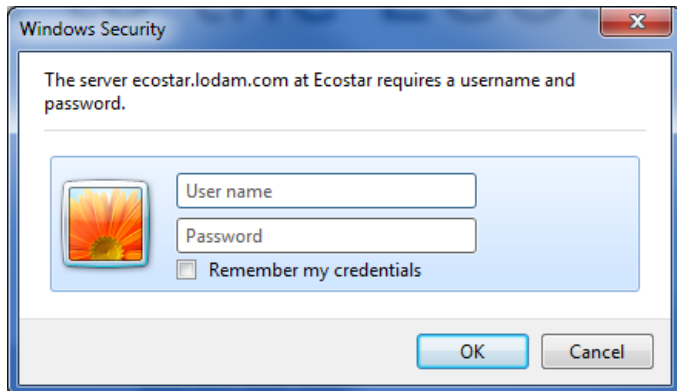

Version 3.0

Product description

The Lodam Ethernet Module, LOM320 is an option module for Lodam's LMC300 controller which extends the network capabilities of the LMC300 and includes a webserver.

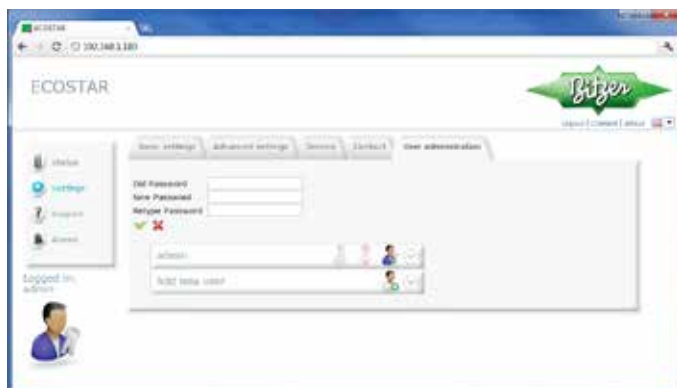

The webserver can be used with the Condensing Unit controller, LMC340 and also with other Lodam controllers.

Menus

The webserver makes it possible to access the controller and view status of the unit, adjust some settings or see if there are alarms.

Before access is granted to the web server, a username and password must be given. This is administered locally on the webserver. The webserver uses standard Linux software so safety is at a very high level.

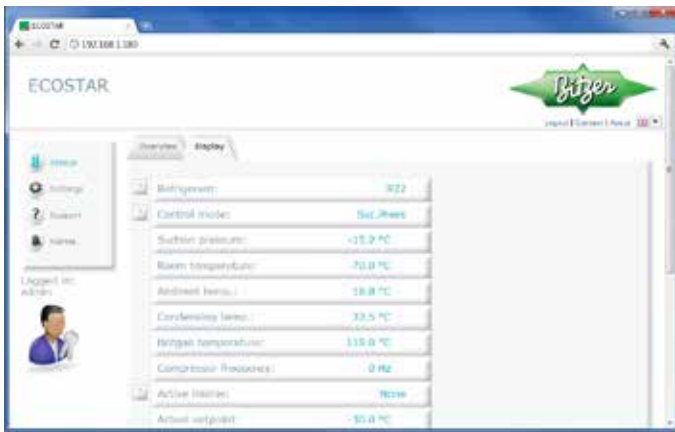

There are two user levels: User and Installer. There can be added more users at both levels. The User level has access to an overview window and basic values.

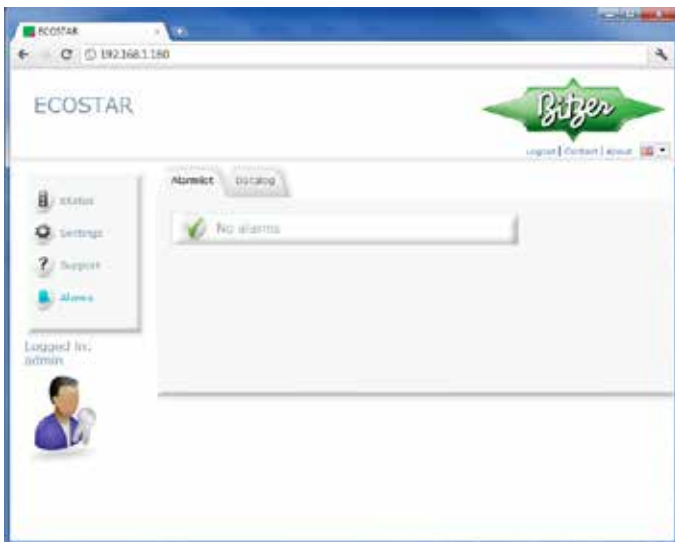

The Installer has access to more settings of the controller and is intended for service purposes.

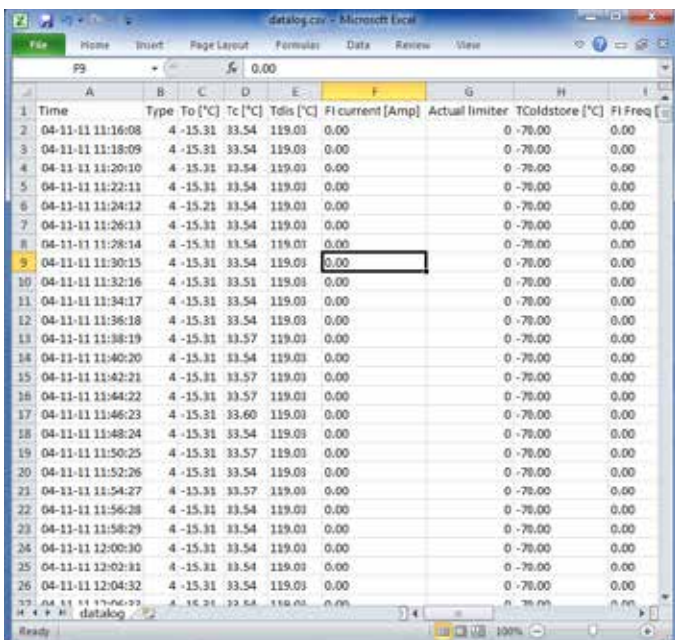

The overview of the condensing unit gives a quick view of how the unit is configured and the different readings.

More detailed information can be selected in a menu with different groups of data including a list with alarms on the unit.

The alarm list includes active alarms and alarms which are solved but not acknowledged yet.

Via the Webserver, the LMC340 Condensing Unit controller's internal datalog can be downloaded for service purposes and shown in Excel and in LMT.

Innovative and energy saving **climate control**

When it comes to climate control Lodam is one of the most experienced you can turn to. For more than four decades we have developed, produced and implemented electronic solutions dedicated to optimising applications like:

- Compressors
- Condensing units
- Heat pumps
- Air conditioning
- Refrigerated truck and trailer
- Reefer containers

We know the importance of reliable, energy-efficient operation – and constantly push technological boundaries to bring you the most innovative and forward-thinking solutions.

As part of the BITZER Group we are backed by one of the world's leading players in the refrigeration and air conditioning industry. This alliance provides us with extensive network and application knowhow and allows us to stay at the forefront of climate control innovation. And to help ensure comfortable surroundings for humans and reliable protection of valuable goods anywhere in the world.
